

ETCT0006 UNIVERSELE SCHUIFLUIFEL

The sliding awning is a large piece of cloth that you can use in different ways. You can use it with the fabric along the right or left side to create a side panel of sorts, it just depends on which side the sun is shining.

How do I choose the right size awning for my caravan?

To determine the correct size of the awning, you need to have the awning rail measurement of the caravan. You can find this information online (caravan make/model) or in the brochure of your caravan.

"Awning rail measurement" refers to the measurement of the circumference of a caravan, taken at the height of the rail where the awning frame is inserted. In other words, it is the perimeter of the caravan, measured at a specific height. The awning rail measurement is a crucial specification when choosing an awning for a caravan because it indicates the appropriate size of awning for the caravan. The awning must fit properly and be attachable to the caravan rail. Therefore, it is essential to know the correct awning rail measurement when selecting accessories such as an awning for your caravan.

Awning rail measurement

Item nr. : ETCT0006 (=style) .02 (=size).240 (=depth)
